Lab Sheet 01

Design a simple Travel Blog website with two pages.

- Make a new folder named **travel-blog**.
- Inside it, create two HTML pages:
 1. **about.html** – Traveler Introduction Page
 - Title with your full name
 - Short paragraph “About Me” as a traveler
 - Profile photo
 - 3-5 travel interests
 - Contact information
 2. **destinations.html** – Travel Stories Page
 - Add 2-3 destinations
 - Each story must have:
 - Destination name + short description
 - A photo
 - A list of highlights/activities

3. GitHub Setup

- a) Create a GitHub Account or log in to your git account.
<https://git-scm.com/downloads/win>
- b) Create a new repository named **travel-blog** on GitHub.

4. Initialize Local Git Repository.

- a) Open the terminal in your travel -blog folder
- b) Run the commands to:
 - Initialize the git repository
 - Stage all files
 - Commit them with the message

5. Connect Local project to GitHub

- a) What command is used to add a remote repository to your local project?
- b) Connect your local repo to the GitHub repository you created in Q2.
- c) Push your local commits to GitHub.

6. Work with Branches.

- a) Create two branches named Traveler and destinations.
- b) Switch to the traveler branch. How can you check which branch you are currently at?
- c) Create a new file called gallery.html with a photo of 2-3 travel images.
- d) Stage and commit the new file with a clear message.
- e) Push the traveler branch to GitHub.

7. Fetch & Pull Updates

- a) On GitHub, use **Add file** → **Create new file** and add a file named **notes.txt** with some text.
- b) Which command is used to fetch updates from the remote repository without merging?
Notice that notes.txt will not appear in your local folder yet.
- c) Switch to the main branch.
- d) Pull the latest updates from the remote repository into your main branch.
Now check your local folder the file “notes.txt” should appear.

8. Clone a Repository.

- a) What command is used to clone a GitHub repository to your local machine?
- b) Clone any existing public repository

Submission Guidelines:

- Prepare a Word document named "PS/XXXX/XXX_Tutorial01" or "EC/XXXX/XXX_Tutorial01".
- Include the following elements:
- Header with your student number, Tutorial Number and course code.
- Source code, git hub link and screenshots of your work.
- Footer with page number.
